

Real-Device Test Checklist — Old Palace Guest App

Live URL: <https://seifabas33-pixel.github.io/splash-entertainment/>

Run this on **two real phones** before handover:

- **iPhone** → Safari (not Chrome — iOS PWA install only works in Safari)
- **Android** → Chrome

Tick each box. If something fails, note the phone + step number and send it over.

Tip: First load may show a slightly older version if you've opened the app before. Pull-to-refresh once, or close and reopen — the service worker now updates code on the next load automatically.

1. First load & entrance

- ☐ Open the link — the **entrance / welcome screen** appears (not the guest app directly)
- ☐ Logos and background image load, nothing looks broken or cut off
- ☐ Tap **Enter** → the main app opens on the **Programme** tab
- ☐ Go **Home** (header house icon) → returns to the entrance screen
- ☐ Tap **Enter** again from the entrance → app opens again (buttons not "dead")

2. Install to home screen (PWA)

iPhone (Safari):

- ☐ Tap **Share** → **Add to Home Screen** → **Add**
- ☐ App icon appears on home screen with the Old Palace icon (not a blank/globe icon)
- ☐ Open from the icon → launches **full-screen** (no Safari address bar)

Android (Chrome):

- ☐ An **"Install app" / "Add to Home screen"** prompt or menu item appears
- ☐ Install → icon on home screen → opens full-screen

3. All nine tabs

Tap through each — content loads, no blank screens, no overlapping text:

- ☐ **Programme** — day selector works, activities listed, category colours show
- ☐ **My Day** — reminders toggle visible; (morning card shows if testing 6am–12pm)
- ☐ **Concierge** — request cards visible
- ☐ **Excursions** — tour cards with prices and **Book** buttons

- ☐ **Dining** — venue cards
- ☐ **Facilities** — facility cards
- ☐ **Your Stay** — welcome card (name + checkout), **WiFi card**, key facts
- ☐ **Gallery** — category pills + photo thumbnails load
- ☐ **Feedback** — feedback category cards

4. Weather

- ☐ **Programme** tab top → current weather strip shows (temp + condition)
- ☐ **3-day forecast** row appears below it with day cards (high/low)
- ☐ Leave the tab and come back → weather still shows (no flicker / blank)

5. Key interactions

- ☐ **Quick Contact FAB** (floating button) → opens the contact sheet → links work
- ☐ **Gallery** → tap a photo → **lightbox** opens full-screen
- ☐ Swipe left/right (or arrows) moves between photos
- ☐ Close (×) returns to the grid
- ☐ **Concierge** → tap a request → **WhatsApp opens** with a pre-filled message
- ☐ **Excursions** → tap **Book** on a tour → WhatsApp opens with the tour pre-filled
- ☐ **Your Stay** → tap the **WiFi password** → "Copied" confirmation shows
- ☐ Header **Share** button → native share sheet opens (Android; may be hidden on iOS if unsupported — that's expected)

6. Languages (very important — Arabic RTL)

Use the language switcher (EN / عربي / DE / RU):

- ☐ **EN** → English everywhere
- ☐ **DE** → German text
- ☐ **RU** → Russian text
- ☐ **عربي (Arabic)** → text switches to Arabic **and the whole layout flips right-to-left**
- ☐ Check **Programme**, **Concierge**, and **Your Stay** in Arabic — nothing

overflows the screen edge, no text overlaps, buttons still reachable

- ☐ Switch back to **EN** → layout flips back to left-to-right cleanly

7. Light / dark mode

- ☐ Tap the **theme toggle** (☾ / ☀ in the header) → switches to **light mode**
- ☐ Walk through **every tab** in light mode — text is readable, no dark-grey

boxes on cream, inputs/cards/pills all legible

- ☐ Check **Your Stay** welcome card inputs and **WiFi card** specifically

- ☐ Toggle back to dark → everything still correct
- ☐ (Optional) Set the **phone** to light/dark at OS level, reopen the app → it should open in the matching theme with **no flash** of the wrong colour

8. Reminders / notifications

- ☐ **My Day** → enable the reminders toggle → grant permission when asked
- ☐ iOS note: notifications only work if the app was ****added to the home screen first**** and opened from the icon — test from there
- ☐ (If practical) wait for / trigger a reminder → notification appears → tapping it opens the app on **My Day**

9. Offline mode

- ☐ With the app open, turn on **Airplane mode**
- ☐ Navigate between tabs → content still loads (served from cache)
- ☐ Close and reopen the app while offline → it still opens (doesn't show the browser's "no internet" error)
- ☐ Turn airplane mode off → weather/data refresh on next visit

10. Staff & admin (do privately, not in front of guests)

- ☐ Entrance → **Staff Sign-in** → enter **palace123** → **Staff Dashboard**
opens (read-only programme; **no edit fields**)
- ☐ Day tabs switch the list; today is pre-selected; evening show shows at the bottom
- ☐ **Print** button opens the print dialog; Exit returns to the entrance
- ☐ Entrance → **Staff Sign-in** → enter **splash2026** → full **Admin editor**
opens (with edit fields + download)
- ☐ Wrong passcode → "Wrong passcode." message

Common gotchas to watch for

- **iOS notifications** need home-screen install first — they won't prompt in the Safari tab.
 - **Small Android phones** — check the Programme day selector and language grid don't get cut off on the right.
 - **Arabic RTL** — the most likely place for layout bugs (text bleeding off-screen, mis-aligned icons). Test it thoroughly.
 - **Stale cache** — if you see an old version, reopen once; the new service worker self-updates.
 - **WhatsApp links** — confirm they open the correct number and the message text is pre-filled and readable.
-

Anything that fails: note the **phone model + step number** (e.g. "iPhone 13, step 6 — Arabic overflows on Concierge") and send it over for a fix.
