

🏰 Staff Guide — Editing the Old Palace Guest App

This app shows guests the daily programme, Wi-Fi, excursions, dining and more.

You can update most of it yourself — no developer needed.

App link: <https://seifabas33-pixel.github.io/splash-entertainment/>

There are two sign-ins:

Sign-in	Passcode	What it does
Staff Dashboard	<code>palace123</code>	Read-only daily programme — check the schedule, print it. Safe, nothing can be changed.
Admin Editor	<code>splash2026</code>	Edit the programme, Wi-Fi & contacts, and excursions. Keep this passcode private.

A. Just want to see today's programme? (Staff Dashboard)

1. Open the app link.
2. On the welcome screen tap **Staff Sign-in**.
3. Enter `palace123`.
4. You'll see the full week's programme. Tap a day tab to switch days.
5. Tap 🖨 **Print** to print the day's schedule. Tap **Exit** when done.

That's it — this view can't change anything, so use it freely.

B. Want to *change* something? (Admin Editor)

Editing has two parts: **(1) edit in the app & download a file**, then **(2) upload that file to GitHub** so the change goes live for guests.

Step 1 — Edit and download

1. Open the app → **Staff Sign-in** → enter `splash2026`.
2. At the top, pick what you want to edit:
 - 📅 **Programme** — daily activities & evening shows
 - 🏰 **Resort Info** — Wi-Fi names/passwords & phone numbers
 - 🚶 **Excursions** — tours, prices, descriptions

1. Change the fields you need. For text that guests see in different languages, fill the **EN / AR / DE / RU** tabs (at minimum fill **EN**).

1. Tap the **Download** button at the bottom

(e.g. "Download programme.json"). A file saves to your device.

 Remember the file name — `programme.json`, `resort-info.json`, or `excursions.json`.
You'll replace the file with the exact same name in Step 2.

Step 2 — Upload to GitHub (this is what makes it go live)

1. Go to the repository on GitHub:

<https://github.com/seifabas33-pixel/splash-entertainment>

1. **Switch to the `gh-pages` branch** — click the branch dropdown (it usually says `main`) and choose `gh-pages`. *This is important — the live app runs from this branch.*

1. Open the `data` folder.
2. Click the file you're replacing (e.g. `programme.json`).
3. Click the **pencil**  (**Edit**) icon → select all the text → delete it →

open your downloaded file in a text editor, copy everything, and paste it in.

*(Or use **Add file** → **Upload files**, drag in your downloaded file, and let it overwrite the existing one.)*

1. Scroll down, write a short note like "Update programme for this week", and click **Commit changes** (keep "commit directly to `gh-pages`" selected).

Step 3 — Check it worked

1. Wait about **1 minute** for GitHub to publish.
2. Open the app and **reload** (close & reopen, or pull down to refresh).
3. Your change should now show. Done! 

What each editor controls

-  **Programme** → the activities and evening shows guests see on the **Programme** and **My Day** tabs, per day of the week.
-  **Resort Info** → the **Wi-Fi** card (network name + password) and the **phone numbers** (reception, dining, WhatsApp) used across the app.
-  **Excursions** → the tour cards on the **Excursions** tab (title, price, description, duration). Guests tap **Book** and it opens WhatsApp pre-filled.

Golden rules

- **Always edit on the `gh-pages` branch.** Editing any other branch won't change

what guests see.

- **Keep the file name identical** — don't rename `programme.json` to anything else.
- **Don't delete commas or quotes** when pasting JSON. If the app shows nothing

after an edit, the file probably has a typo — re-download a fresh copy from the Admin Editor and try again.

- **Keep `splash2026` private.** Give staff `palace123` (read-only) instead.
- If anything breaks, the previous version is always safe in GitHub's history —

nothing is ever truly lost.

Questions or something won't update? Send the file name + what you changed and we'll sort it out.
